

## Pro-Max 36 Mowing System

### *One Awesome Super-mower*

The **Pro-Max 36**, when paired with the Progressive **TD92** rotary finishing mower, produces a mowing system that delivers a 36 foot wide cut. Towed by a 100 H.P. tractor the **Pro-Max 36** mowing system can cut up to 33 acres per hour but best of all, the Progressive quality of cut is maintained. With a zero uncut circle and the ability to reverse, the Pro-Max 36 truly is a mowing system. The **Pro-Max 36**, although a large machine has footprint of only 7 pounds per square inch, so wheel marks and potential rutting need not be a concern.

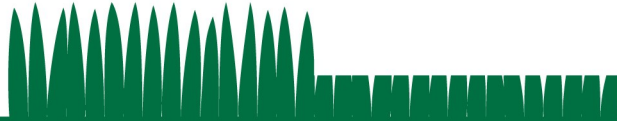

Focusing on the needs of the turfgrass producer, Progressive offers four blade options for the **PM36**. A producer can optimize the cut and maintenance costs depending upon the growing conditions by selecting between two fixed blade lifts and two Pro-EZ Change Blade options - all featuring the renowned Progressive cut quality.

Like the TD92, the **PM36** is equipped with **Maintenance free blade spindles** reducing the cost of routine maintenance.

If you want to increase your mowing productivity, attach your **TD92** to a **Pro-Max 36** and enjoy years of reliable mowing with the best productivity in the industry. The **Pro-Max 36** is not just one awesome super-mower, it is also, **"The Better Built Choice"**.

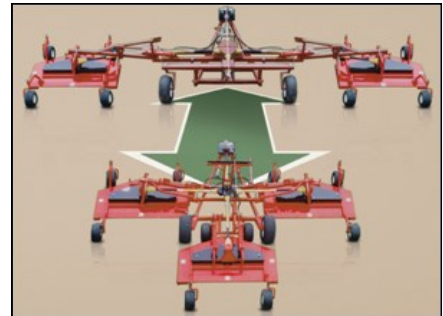

*The Better Built Choice.™*

**Pro-Max Mowing System:**

The Progressive Pro-Max Mowing System is a 5 deck finishing mower that is the combination of the highly successful Progressive TD92 and the PM-36. Together they provide a wide 36' cut and give a whole new meaning to productivity! Often growers begin with a TD92 and add a PM-36 later to meet their increased production needs.

**Commonality of Parts:**

For easy servicing and part availability, many key components are common between the PM-36 and TD92. For instance, all five mower deck components are totally interchangeable. This keeps the stock of spare parts required to a minimum and uptime to the max! This keeps the stock of spare parts to a minimum and uptime to the max!

**Excellent Floatation and Easy Cutting Height Adjustment**

The **Pro-Max Mowing System** is easy on the turf. Low ground pressure is achieved with 8 large low pressure floatation tires on the **PM-36** and 10 on the **TD92**, all staggered to provide minimum soil compaction. In addition, 4 transport tires help to further reduce ground pressure while mowing.

Cutting height adjustment can be simply done by removing a lynch pin from the top of each castor stem, and moving the spacers either above or below the support tube as required.

**Lowering the Cost of Operation : Maintenance Free Blade Spindles**

Developed and tested over several years, Maintenance Free Blade Spindles are used to both lower cost and time spent on routine maintenance. They also provide peace of mind that a missed greasing won't render the mower out of service.
